

# stamfordtutoring.org – Full Design Document

## User Demographics

1. High School Students (Ages 14–18): Students seeking academic support. 2. Volunteer Tutors (Ages 15–18): Students providing tutoring assistance. 3. Parents & Guardians: Adults ensuring academic support access. 4. Program Administrators: Manage scheduling and program participation.

## User Persona

Name: Sofia Ramirez Age: 16 Background: AP student with extracurricular commitments, needs flexible support. Needs: Easy scheduling, communication, and reminders. Solution: stamfordtutoring.org enables quick booking, chat, and session reminders.

## Value Proposition

stamfordtutoring.org solves the problem of inconsistent tutoring scheduling by providing a centralized ~~platform for booking, communication, and session management. It increases accessibility and~~ organization while scaling easily as participation grows.

## User Research

Three primary research methods: - Interviews: Students and tutors emphasized need for faster scheduling. - Google Form Survey: Majority prefer website over group chats. - Observation: Current scheduling is manual and inconsistent.

## Brainstorming

Ideas: 1. Service hour tracking. 2. Resource library. 3. Tutor profile pages. Integrated: - Hour tracking aligns with school requirements. - Resources support learning when tutors unavailable. - Tutor profiles help students choose confidently.

## Feedback Gathering

Three users reviewed prototype: Student: Booking flow should be faster. Tutor: Needs clearer upcoming schedule overview. Program Lead: Analytics should filter by date.

## Feedback Integration

Patterns: 1. Users want fewer steps in booking. 2. Users want clear display of scheduled sessions. Changes: - Combine selection steps into one page. - Add "My Schedule" view for upcoming sessions.
